Операционные системы

Анализ файловой структуры UNIX. Команды для работы с файлами и каталогами

Александра Кондрацкая

14 марта 2025

Российский университет дружбы народов, Москва, Россия

Цели и задачи работы —

Цель лабораторной работы

Ознакомление с файловой системой Linux, её структурой, именами и содержанием каталогов. Приобретение практических навыков по применению команд для работы с файлами и каталогами, по управлению процессами, по проверке использования диска и обслуживанию файловой системы.

Задачи лабораторной работы

- 1 Выполнить приимеры
- 2 Выполнить дествия по работе с каталогами и файлами
- 3 Выполнить действия с правами доступа
- 4 Получить дополнительные сведения при помощи справки по командам.

Процесс выполнения лабораторной работы

Выполнение примеров

```
aekondrackaya@aekondrackaya:~$
aekondrackaya@aekondrackaya:~$ touch abcl
aekondrackaya@aekondrackaya:~$ cp abc1 april
aekondrackaya@aekondrackaya:~$ cp abc1 may
aekondrackaya@aekondrackaya:~$ mkdir monthly
aekondrackaya@aekondrackaya:~$ cp april may monthly
aekondrackaya@aekondrackaya:~$ cp monthly/may monthly/june
aekondrackava@aekondrackava:~$ ls monthly
april iune mav
aekondrackaya@aekondrackaya:~$ mkdir monthly.00
aekondrackaya@aekondrackaya:~$ cp -r monthly monthly.00
aekondrackaya@aekondrackaya:~$ cp -r monthly.00 /tmp
aekondrackaya@aekondrackaya:~$
```

Рис. 1: Выполнение примеров

```
aekondrackaya@aekondrackaya:~$
aekondrackaya@aekondrackaya:~$ mv april july
aekondrackaya@aekondrackaya:~$ mv july monthly.00
aekondrackaya@aekondrackaya:~$ ls monthly.00
july monthly
aekondrackaya@aekondrackaya:~$ mv monthly.00 monthly.01
aekondrackaya@aekondrackaya:~$ mkdir reports
aekondrackaya@aekondrackaya:~$ mv monthly.01 reports
aekondrackaya@aekondrackaya:~$ mv reports/monthly.01 reports/monthly
aekondrackaya@aekondrackaya:~$
```

Рис. 2: Выполнение примеров

```
aekondrackaya@aekondrackaya:-$
aekondrackaya@aekondrackaya:-$ touch may
aekondrackaya@aekondrackaya:-$ ls -l may
-rw-r--r--. 1 aekondrackaya aekondrackaya 0 map 14 12:46 may
aekondrackaya@aekondrackaya:-$ chmod u+x may
aekondrackaya@aekondrackaya:-$ ls -l may
-rwxr--r--. 1 aekondrackaya aekondrackaya 0 map 14 12:46 may
aekondrackaya@aekondrackaya:-$ chmod u-x may
aekondrackaya@aekondrackaya:-$ ls -l may
-rw-r--r--. 1 aekondrackaya aekondrackaya 0 map 14 12:46 may
aekondrackaya@aekondrackaya:-$ chmod g-r,o-r monthly
aekondrackaya@aekondrackaya:-$ touch abc1
aekondrackaya@aekondrackaya:-$
```

Рис. 3: Выполнение примеров

Создание директорий и копирование файлов

```
aekondrackaya@aekondrackaya:~$ cp /usr/include/linux/sysinfo.h ~
aekondrackaya@aekondrackaya:~$ mv sysinfo.h equipment
aekondrackaya@aekondrackaya:~$ mkdir ski.plases
aekondrackava@aekondrackava:~$ mv equipment ski.plases/
aekondrackaya@aekondrackaya:~$ mv ski.plases/equipment ski.plases/equiplist
aekondrackava@aekondrackava:~$ touch abc1
aekondrackaya@aekondrackaya:~$ cp abc1 ski.plases/equiplist2
aekondrackava@aekondrackava:~$ cd ski.plases/
aekondrackava@aekondrackava:~/ski.plases$ mkdir equipment
aekondrackaya@aekondrackaya:~/ski.plases$ my equiplist equipment/
aekondrackaya@aekondrackaya:~/ski.plases$ mv equiplist2 equipment/
aekondrackaya@aekondrackaya:~/ski.plases$ cd
aekondrackaya@aekondrackaya:~$ mkdir newdir
aekondrackava@aekondrackava:~$ mv newdir ski.plases/
aekondrackava@aekondrackava:~$ mv ski.plases/newdir/ ski.plases/plans
aekondrackava@aekondrackava:~$
```

Рис. 4: Работа с каталогами

Работа с командой chmod

```
яекониг аскауа@аекониг аскауа : ~ $
aekondrackava@aekondrackava:~$ mkdir australia plav
aekondrackaya@aekondrackaya:~$ touch my os feathers

System Administration
NAME
SYNOPSES
      mount [-h|-V]
      mount [-l] [-t fstype]
      mount -a [-fFnrsvw] [-t fstype] [-0 optlist]
      mount [-fnrsvw] [-o options] device|mountpoint
      mount [-fnrsvw] [-t fstype] [-o options] device mountpoint
      mount --bind|--rbind|--move olddir newdir
      mount --make-[shared|slave|private|unbindable|rshared|rslave|rprivate|runbindable| mountpoint
DESCRIPTION
      can be spread out over several devices. The mount command serves to attach the filesystem found on some device to
      the big file tree. Conversely, the umount(8) command will detach it again. The filesystem is used to control how
      data is stored on the device or provided in a virtual way by network or other services.
      The standard form of the mount command is:
         mount -t type device dir
      This tells the kernel to attach the filesystem found on device (which is of type type) at the directory dir. The
      option -t type is optional. The mount command is usually able to detect a filesystem. The root permissions are
      necessary to mount a filesystem by default. See section "Non-superuser mounts" below for more details. The
      previous contents (if any) and owner and mode of dir become invisible, and as long as this filesystem remains
      mounted, the pathname dir refers to the root of the filesystem on device
         mount /dir
      then mount looks for a mountpoint (and if not found then for a device) in the /etc/fstab file. It's possible to
Manual page mount(8) line 1 (press h for help or q to quit)
```

System Administration NAME SYNOPSIS mkfs [options] [-t type] [fs-options] device [size] DESCRIPTION This mkfs frontend is deprecated in favour of filesystem specific mkfs.<type> utils. mkfs is used to build a Linux filesystem on a device, usually a hard disk partition. The device argument is either the device name (e.g., /dev/hdal, /dev/sdb2), or a regular file that shall contain the filesystem. The size argument is the number of blocks to be used for the filesystem. The exit status returned by mkfs is 0 on success and 1 on failure. In actuality, mkfs is simply a front-end for the various filesystem builders (mkfs.fstype) available under Linux. The filesystem-specific builder is searched for via your PATH environment setting only. Please see the filesystem-specific builder manual pages for further details. OPTIONS -t. --type type Specify the type of filesystem to be built. If not specified, the default filesystem type (currently ext2) is fs-options -V. --verbose Produce verbose output, including all filesystem-specific commands that are executed. Specifying this option more than once inhibits execution of any filesystem-specific commands. This is really only useful for testing. -h. --help -V. --version Print version and exit. (Option -V will display version information only when it is the only parameter. otherwise it will work as --verbose.)

```
User Commands
SYNOPSIS
      kill [-signal|-s signal|-p] [-q value] [-a] [--timeout milliseconds signal] [--] pid|name...
      kill -l [number] | -L
DESCRIPTION
      The command kill sends the specified signal to the specified processes or process groups.
      If no signal is specified, the TERM signal is sent. The default action for this signal is to terminate the
      process. This signal should be used in preference to the KILL signal (number 9), since a process may install a
      handler for the TERM signal in order to perform clean-up steps before terminating in an orderly fashion. If a
      process does not terminate after a TERM signal has been sent, then the KILL signal may be used; be aware that the
      latter signal cannot be caught, and so does not give the target process the opportunity to perform any clean-up
      Most modern shells have a builtin kill command, with a usage rather similar to that of the command described here.
      The --all, --pid, and --queue options, and the possibility to specify processes by command name, are local
ARGUMENTS
              where n is larger than 0. The process with PID n is signaled.
              All processes with a PID larger than 1 are signaled.
Manual page kill(1) line 1 (press h for help or g to guit)
```

Выводы по проделанной работе

В ходе данной работы мы ознакомились с файловой системой Linux, её структурой, именами и содержанием каталогов. Научились совершать базовые операции с файлами, управлять правами их доступа для пользователя и групп. Ознакомились с Анализом файловой системы. А также получили базовые навыки по проверке использования диска и обслуживанию файловой системы.
